# PROGRESSION IN MENTAL CALCULATION SKILLS

<u>Recall</u>	<u>Mental calculation skills</u>	<u>Mental methods or strategies</u>
Children should be able to derive and recall:	Working mentally – with jottings if needed – children should be able to do the following:	Children should be able to apply the following strategies/methods appropriately:
<b>YEAR 1</b>		
<ul style="list-style-type: none"> <li>• doubles of all numbers to 10, e.g. double 6</li> <li>• odd and even numbers to 20</li> </ul>	<ul style="list-style-type: none"> <li>• count in multiples of twos, fives and tens from different multiples.</li> </ul>	<ul style="list-style-type: none"> <li>• Use the patterns of the last digits e.g. 0 and 5 when counting in 5s. Knowing that all multiples of 2 are even.</li> </ul>
<b>YEAR 2</b>		
<ul style="list-style-type: none"> <li>• doubles of all numbers to 20, e.g. double 13 and corresponding halves.</li> <li>• doubles of multiples of 10 to 50, e.g. double 40 and corresponding halves</li> <li>• multiplication facts for the 2, 5 and 10 times tables and corresponding division facts</li> <li>• odd and even numbers to 100</li> </ul>	<ul style="list-style-type: none"> <li>• count in steps of 2, 3, and 5 from 0, and in tens from any number, forward or backward</li> <li>• double any multiple of 5 up to 50, e.g. 35.</li> <li>• halve any multiple of 10 up to 100, e.g. halve 90</li> <li>• find half of even numbers to 40</li> <li>• find the total number of objects when they are organised into groups of 2, 5 or 10</li> </ul>	<ul style="list-style-type: none"> <li>• <b>partition</b> – double the tens and ones separately then recombine</li> <li>• use knowledge that halving is the inverse of doubling and that doubling is equivalent to multiplying by two.</li> <li>• use knowledge of multiplication facts from the 2, 5 and 10 times tables, e.g. recognise that there are 15 objects altogether because there are three groups of five</li> <li>• use the commutative law and inverse relations to develop multiplicative reasoning (e.g. <math>4 \times 5 = 20</math> and <math>20 \div 5 = 4</math>).</li> </ul>

# PROGRESSION IN MENTAL CALCULATION SKILLS

## YEAR 3

<u>Recall</u>	<u>Mental calculation skills</u>	<u>Mental methods or strategies</u>
<p><b>Children should be able to derive and recall:</b></p>	<p><b>Working mentally – with jottings if needed – children should be able to do the following:</b></p>	<p><b>Children should be able to apply the following strategies/methods appropriately:</b></p>
<ul style="list-style-type: none"> <li>• multiplication facts for the 2, 3, 4, 5, 8 and 10 times tables and corresponding division facts.</li> <li>• doubles of multiples of 10 to 100, e.g. double 90 and corresponding halves.</li> </ul>	<ul style="list-style-type: none"> <li>• count on or back in 1s, 10s or 100s starting from any 2 or 3 digit number.</li> <li>• double any multiple of 5 up to 100, e.g. 75.</li> <li>• halve any multiple of 10 up to 200, e.g. halve 170.</li> <li>• multiply one-digit or two-digit numbers by 10 or 100, e.g. <math>7 \times 100</math>, <math>46 \times 10</math>, <math>54 \times 100</math></li> <li>• find unit fractions of numbers and quantities involving halves, thirds, quarters, fifths and tenths</li> </ul>	<ul style="list-style-type: none"> <li>• use doubling to connect the 2, 4 and 8 times table.</li> <li>• <b>partition</b> – when doubling, double the tens and ones separately, then recombine. When halving, halve the tens and ones separately, then recombine</li> <li>• use knowledge that halving and doubling are inverse operations</li> <li>• using the commutative law to make calculations easier (rearranging numbers), e.g. <math>4 \times 12 \times 5 = 4 \times 5 \times 12 = 20 \times 12 = 240</math>.</li> <li>• recognise that when multiplying by 10 or 100 the digits move one or two places to the left and zero as a place holder.</li> <li>• use multiplication and division facts (e.g. using <math>3 \times 4 = 12</math>, <math>12 \div 4 = 3</math> and <math>3 \times 12 = 36</math>) to derive related facts (<math>30 \times 4 = 120</math>, <math>120 \div 4 = 30</math> and <math>30 = 120 \div 4</math>).</li> </ul>

- Recognise that finding a unit fraction is equivalent to dividing by the denominator and use knowledge of division facts.

## PROGRESSION IN MENTAL CALCULATION SKILLS

<b>YEAR 4</b>		
<u>Recall</u>	<u>Mental calculation skills</u>	<u>Mental methods or strategies</u>
Children should be able to derive and recall:	Working mentally – with jottings if needed – children should be able to do the following:	Children should be able to apply the following strategies/methods appropriately:
<ul style="list-style-type: none"> <li>• recall multiplication and division facts for multiplication tables up to 12 x 12.</li> <li>• doubles of numbers 1 to 100, e.g. double 58 and corresponding halves</li> <li>• doubles of multiples of 10 to 100 and corresponding halves</li> <li>• factor pairs for known multiplication facts</li> </ul>	<ul style="list-style-type: none"> <li>• count in multiples of 6, 7, 9, 25 and 1000</li> <li>• double any 2 digit number, e.g. double 39</li> <li>• double any multiple of 10 or 100, e.g. double 340, double 800 and halve the corresponding multiples of 10</li> <li>• multiply and divide numbers to 1000 by 10 and then 100, e.g. <math>325 \times 10</math>, <math>42 \times 100</math>, <math>120 \div 10</math>, <math>600 \div 100</math>, <math>850 \div 10</math></li> <li>• multiply a multiple of 10 to 100 by a single digit number, e.g. <math>40 \times 6</math>. Multiply numbers to 20 by a single digit, e.g. <math>17 \times 3</math></li> <li>• give the factor pair associated with a multiplication fact, eg. identify that if <math>2 \times 3 = 6</math> then 6 has the factor pair 2 and 3</li> </ul>	<ul style="list-style-type: none"> <li>• <b>partition</b> – double or halve the tens and ones separately, then recombine</li> <li>• use understanding that when a number is multiplied or divided by 10 or 100, its digits move one or two places to the left or the right and zero is used as a place holder</li> <li>• use knowledge of multiplication facts and place value, e.g. <math>7 \times 8 = 56</math> to find <math>70 \times 8</math>, <math>7 \times 80</math></li> <li>• use partitioning and the distributive law to multiply, e.g.  <math display="block">16 \times 7 = (10 + 6) \times 7</math> <math display="block">= (10 \times 7) + (6 \times 7)</math> <math display="block">= 70 + 42 = 112</math> </li> <li>• use the associative law to multiply (rearranging operations), e.g. <math>(2 \times 3) \times 4 = 2 \times (3 \times 4)</math></li> </ul>

	<ul style="list-style-type: none"> <li>divide a 2-digit number by a single-digit number, e.g. <math>84 \div 3</math></li> </ul>	<ul style="list-style-type: none"> <li>use branching to chunk off multiples of the divisor using knowledge of multiplication facts and multiplying by multiples of 10, e.g. <math>84 \div 3 = (20 \times 3) + (8 \times 3) = 28</math></li> </ul>
--	---	---

## PROGRESSION IN MENTAL CALCULATION SKILLS

<b>YEAR 5</b>		
<u>Recall</u>	<u>Mental calculation skills</u>	<u>Mental methods or strategies</u>
Children should be able to derive and recall:	Working mentally – with jottings if needed – children should be able to do the following:	Children should be able to apply the following strategies/methods appropriately:
<ul style="list-style-type: none"> <li>recall multiplication and division facts for multiplication tables up to <math>12 \times 12</math>.</li> <li>square numbers to <math>12 \times 12</math></li> <li>percentage equivalents of one half, one quarter, three quarters, tenths and hundredths</li> <li>factor pairs to 100</li> <li>prime numbers up to 19</li> </ul>	<ul style="list-style-type: none"> <li>count forwards or backwards in steps of powers of 10 for any given number up to 1 000 000</li> <li>multiply and divide two digit numbers by 4, 5, 8 or 20, e.g. <math>26 \times 4</math>, <math>320 \times 5</math>, <math>14 \times 20</math>, <math>96 \div 8</math></li> <li>multiply by 25 or 50, e.g. <math>48 \times 25</math>, <math>32 \times 50</math></li> <li>multiply and divide whole numbers and decimals by 10, 100 or 1000, e.g. <math>4.3 \times 10</math>, <math>0.75 \times 100</math>, <math>673 \div 100</math></li> <li>multiply pairs of multiples of 10, e.g. <math>60 \times 30</math> and a multiple of 100 by a single digit number, e.g. <math>900 \times 8</math></li> </ul>	<ul style="list-style-type: none"> <li>multiply or divide by 4 or 8 by repeated doubling or halving. To multiply by 5, multiply by 10 then halve; to multiply by 20, double, then multiply by 10</li> <li>to multiply by 5, multiply by 10 then halve; to multiply by 20, double then multiply by 10 or multiply by 10 then double</li> <li>use knowledge of doubles/halves and understanding of place value, e.g. when multiplying by 50 multiply by 100 and divide by 2</li> <li>use understanding that when a number is multiplied or divided by 10 or 100, its digits move one or two places to the left or the right</li> </ul>

	<ul style="list-style-type: none"><li>• divide a multiple of 10 by a single digit number, e.g. <math>80 \div 4</math>, <math>270 \div 3</math></li><li>• find factor pairs for numbers to 100. E.g. 30 has the factor pairs 1 x 30, 2 x 15, 3 x 10 and 5 x 6.</li><li>• Multiply and divide 2-digit decimals such as <math>0.8 \times 7</math>, <math>4.8 \div 6</math></li><li>• divide a 3-digit number by a single-digit number, e.g. <math>154 \div 7</math></li></ul>	<p>relative to the decimal point and zero is used as a place holder.</p> <ul style="list-style-type: none"><li>• use the distributive (<b>partitioning</b>), commutative (rearranging numbers) and associative law (rearranging operations) for multiplication to make calculations easier.</li><li>• doubling one number and halving another to get to the product, e.g. <math>25 \times 32 = 50 \times 16 = 100 \times 8</math></li><li>• use branching to chunk off multiples of the divisor using knowledge of multiplication facts and multiplying by multiples of 10, e.g. <math>154 \div 7 = (\underline{20} \times 7) + (\underline{2} \times 7) = 22</math></li></ul>
--	--	--

## PROGRESSION IN MENTAL CALCULATION SKILLS

<b>YEAR 6</b>		
<u>Recall</u>	<u>Mental calculation skills</u>	<u>Mental methods or strategies</u>
<p><b>Children should be able to derive and recall:</b></p>	<p><b>Working mentally – with jottings if needed – children should be able to do the following:</b></p>	<p><b>Children should be able to apply the following strategies/methods appropriately:</b></p>
<ul style="list-style-type: none"> <li>• recall multiplication and division facts for multiplication tables up to 12 x 12.</li> <li>• identify common factors and common multiples</li> <li>• Prime numbers up to 100</li> <li>• Equivalent fractions, decimals, percentages for hundredths, e.g. 35% is equivalent to 0.35 or 35/100</li> </ul>	<ul style="list-style-type: none"> <li>• count on or back in tenths, hundredths and thousandths</li> <li>• multiply pairs of 2-digit and single digit numbers, e.g. 28 x 3</li> <li>• divide by 25 or 50, e.g. 480 ÷ 25, 3200 ÷ 50</li> <li>• double decimals to 1 dp, e.g. double 7.6 and find the corresponding halves, e.g. half of 15.2</li> <li>• multiply pairs of multiples of 10 and 100, e.g. 50 x 30, 600 x 20</li> </ul>	<ul style="list-style-type: none"> <li>• to divide by 25, divide by 100, then multiply by 4; to divide by 50, divide by 100 then double</li> <li>• use the distributive (<b>partitioning</b>), commutative (rearranging numbers) and associative law (rearranging operations) for multiplication to make calculations easier.</li> <li>• doubling one number and halving another to get to the product, e.g. 25 x 32 = 50 x 16 = 100 x 8</li> </ul>

	<ul style="list-style-type: none"><li>• divide multiples of 100 by a multiple of 10 or 100 (whole number answer), e.g. <math>600 \div 20</math>, <math>800 \div 400</math>, <math>2100 \div 300</math></li><li>• divide a 3-digit number by a 2-digit number, e.g. <math>336 \div 14</math></li><li>• scale up and down using known facts, e.g. given that 3 oranges cost 24p, find the cost of 4 oranges</li></ul>	<ul style="list-style-type: none"><li>• use branching to chunk off multiples of the divisor using knowledge of multiplication facts and multiplying by multiples of 10, e.g. <math>336 \div 14 = (\underline{20} \times 14 = 280) + (\underline{4} \times 14 = 56) = 24</math></li><li>• recognise how to scale up or down using multiplication and division, e.g. if 3 oranges cost 24p:  <b>one orange costs <math>24 \div 3 = 8\text{p}</math></b> <b>four oranges cost <math>8 \times 4 = 32\text{p}</math></b></li></ul>
--	---	---
